

Self-loading spreaders

AM self-loading spreaders

AM self-loading spreaders

The AM-1512 "self-loading" spreaders series, characterised by an Archimedean screw feed system with spreading via disk, has been designed to be used on the third point of farm tractors, equipment carriers and operating machines. Specific attention has been focused on the design of the high resistance steel hopper, with special conformation conceived expressly to make loading and unloading operations faster and more efficient relative to materials normally used in spreading operations (sand, salt, grit etc.).

Tip-up is achieved by means of a double action hydraulic cylinder.

Performances AM-1512

Capacity: 1.2 m³

Spread width: 1.0 – 7.0 m with adjustable step via manual adjustment of the flow valve.

Spread asymmetry: Possibility of adjusting right – symmetric – left – asymmetry, via manual movement of the disk (with the machine immobile).

Use: The AM-1512 self-loading spreader has been designed to be mounted on both the front and rear section of vehicles.

Assistance

Giletta S.p.A.'s international success is based on an extensive network of distributors offering consultancy that is specialised, qualified and close to the customer. Giletta S.p.A.'s assistance already starts in the equipment design phase where, taking customers' requests into account, customised solutions can be carried out.

The heart of all work lies in the training and continual updating of highly specialised collaborators, as well as the new and efficient fully automated spare parts warehouse.

Certified quality and superb price/quality ratio

Giletta S.p.A.'s search for quality is clearly evident in the continual technological development of its equipment, constantly guaranteeing lower maintenance costs and longer product life.

Which is why our products represent the very best solution in terms of performances for the entire duration of your investment.

 The manufacturer reserves the right to apply any technical, functioning or appearance change without prior advice. Figures, characteristics and data are indicative only, therefore not binding to the manufacturer.
